Bilateral Meetings

- 02:00 pm - 06:30 pm

Description

Ferrari Costruzioni Meccaniche is a company at the fore front of **mechanization in the horticultural field**.

The company specializes in the **production of transplanting machines**, both mechanical and automatic, for plants in square blocks, modules and bare roots.

Ferrari machines are suitable for planting a wide variety of vegetables including: lettuce, tomatoes, eggplants, cabbages and even tobacco.

The guidelines of the company are based on **innovation and continuous development of the products** which are all proudly patented. Machines that may look very simple from a conceptual point of view are significantly different from the ones other brands are offering. The products manufactured by Ferrari have been studied and developed by using modern technological processes combined with many years of experience in the field.

Ferrari Costruzioni Meccaniche sells both to **national and international markets**. Our name is well known in many countries all over the world. The Ferrari transplanting machines perform in America and China, Europe and Australia, Africa and Asia ..
